

I am a current XM Radio subscriber. I feel that XM has the same right of broadcasting traffic and weather as does every other radio station.m Not only is this public information. It is also another another medium in which to give people important information. Severe weather and hazardous traffic conditions can be an issue of public safety. The more ways to advise the people, the safer we all become. Please reject NAB's petition because it is nothing more than just more legal garrbage to make more lawyers rich. What would be next, they would command which songs other radio stations could play.
